Summary

Economist and software developer with a background spanning academic research, competition consulting, and tax technology. Trained as a theoretical microeconomist, I bring rigorous analytical thinking to software development — building production-quality applications in C#, Blazor, and JavaScript across professional and personal projects. I work best on problems that reward both technical precision and subject matter depth, in international environments with equally driven colleagues.

Core Competencies

Languages & frameworks	C#, Blazor WebAssembly, Avalonia, JavaScript, React, Python, PHP
Tools & platforms	Git, Azure DevOps, Alteryx (Advanced Certified), Selenium, VSTO, Vite/npm, XAMPP/MySQL
Domain knowledge	Economic analysis, competition law, supply chain & tax
Other	Analytical writing, data visualisation, staff supervision

Employment

Senior Tax Technology Advisor

January 2025 – present
Brussels, BE

KPMG

Built and maintained software solutions for internal tax processes across VSTO Excel add-ins and a multi-language corporate tax filing platform, working primarily in C# and JavaScript.

- Developed and maintained VSTO Excel add-ins for time entry and client invoicing, deployed to over 200 users across Tax, Legal & Accountancy departments.
- Implemented a rich text editor extending native Excel cell functionality with bullet points, dynamic numbered lists with automatic renumbering, indent management, and Word-like keyboard behaviour — achieved through keydown event handling and regex lookaheads.
- Contributed to a multi-language corporate tax filing platform supporting English, Dutch, and French — generating validated Excel, XML, and PDF outputs for statutory filing.
- Built an Alteryx workflow for iterative account number mapping using maximum substring length matching, independently replicating the logic of an existing C# implementation to translate it into a more maintainable low-code solution.
- Developed a Silverfin client questionnaire – consolidating client data collection into a single platform and eliminating dependence on emailed Excel attachments – including conditional sections revealed dynamically by client responses.
- Identified the invoicing add-in as a candidate for Blazor WebAssembly migration — recognising that centralised intranet deployment would eliminate the overhead of distributed Excel add-in releases — and developed a working prototype independently as part of a deliberate effort to deepen Blazor expertise.

Senior Tax Advisor

July 2024 – January 2025
Brussels, BE

KPMG — *Transfer Pricing*

Advised clients on intercompany transaction pricing under OECD guidelines across benchmarking, methodology documentation, and statutory compliance filing.

- Contributed to a cross-border payment structure project spanning up to 50 jurisdictions across automotive, industrial, and defense technology clients, coordinating advice between local offices and contributing to client-facing summary reports.
- Conducted benchmarking analyses using Bureau van Dijk, Orbis, and TP Catalyst for intercompany transactions valued in the millions of Euros.

Economist

November 2021 – November 2023
Brussels, BE

Compass Lexecon

Supported competition cases across Abuse of Dominance, Damages Assessment, Mergers and Acquisitions, and State Aid, advising on theoretical foundations, drafting expert analysis, and managing junior analysts.

- Drafted memos, rebuttals, and contributions to expert reports submitted to the European Commission and other regulatory bodies, distilling complex economic theory for general audiences.
- Engaged directly with clients on strategy, workstream progress, and alternate approaches, serving as liaison between junior and senior staff.
- Employed a programming-first approach in Stata, writing dynamic reusable scripts applicable across multiple aspects of a case to ensure consistency and efficiency.

Lecturer

University of California

September 2019 – December 2020

San Diego, CA, US

Designed and delivered undergraduate Economics courses including Principles of Microeconomics, Macroeconomics, and Financial Markets to classes of 30–200 students.

- Created original problem sets, practice exams, and review sessions; supervised a team of up to five Teaching Assistants responsible for discussion sections and grading.

Graduate Teaching Assistant

Columbia University

July 2013 – August 2019

New York, NY, US

Led weekly discussion sections and held office hours for undergraduate and graduate Economics courses including Intermediate Microeconomics, Economics of Risk and Uncertainty, and Microeconomic Analysis for Graduate Students. Contributed to problem set and exam design and coordinated grading across TA teams.

Portfolio Projects

christopherdgibson.github.io/work

- NYC 311 Dashboard — Interactive Blazor WebAssembly data dashboard with live filtering and real-time chart updates, statically hosted on GitHub Pages.
- Report Download Hub — Cross-platform desktop application in Avalonia with C# Selenium backend for automated document collection from EU and Belgian government sources.
- WordPress Plugins — Two custom Gutenberg blocks built from scratch in React, developed in a Dockerised local environment.
- Transfer Pricing Rules Engine (in development) — Python and FastAPI; separates rules from evaluation logic so regulatory changes do not require rewriting the engine.
- Personal Portfolio Site — Vanilla HTML, CSS, and JavaScript with a custom SPA navigation system; page transitions are instant by design, without the overhead of a framework.

Additional Experience

Research Associate	<i>Board of Governors, Federal Reserve</i>	Oct 2011 – Aug 2012
Research Associate	<i>International Monetary Fund</i>	Oct 2009 – Oct 2011
Associate Economist	<i>Federal Reserve Bank of Chicago</i>	Aug 2007 – Oct 2008

Education

Columbia University	New York, NY, USA
PhD in Economics	2019
MPhil in Economics	2015
MA in Economics	2014
Northwestern University	Evanston, IL, USA
BA in Economics	2007
BA in Mathematics	2007

Research

Primary field: Behavioural Finance **Secondary field:** Microeconomic Theory
